

# Healing People. Transforming Lives.

## How Far Hope Can Go

This impact report highlights some of the ways Project HOPE was able to strengthen access to health care worldwide in 2023. In a year marked by violent conflict, major disasters, and devastating humanitarian crises, Project HOPE's teams worked tirelessly to save lives and improve health outcomes whenever — and wherever — they were needed most.

So much of what the world sees are the stories that make headlines. But I'm equally proud of how Project HOPE is improving access to care in the contexts that don't. That's what I'll take with me from this year: that our global health teams are equally committed to delivering the solutions that transform health, whether it's in a conflict that catches the world's notice or a rural delivery room that won't.

There is no clinic too small and no community too remote to be deserving of hope. In a year that will be marked in many ways by tragedy, I'm honored to work for an organization committed to delivering it.

**Rabih Torbay**  
President and CEO,  
Project HOPE

## In the last year Project HOPE...

Reached more than  
**3.5 million** people worldwide,  
including **2.3 million** people  
affected by disasters and  
humanitarian crises

Provided direct medical  
services to **827,000** patients

Screened or tested  
**229,000** people for TB,  
HIV, diabetes, hypertension,  
or other diseases

Reached **461,000** people  
affected by HIV/AIDS

Donated **\$50 million**  
in essential equipment, medicines,  
and medical supplies

Project HOPE's response to the February 2023 earthquake in Türkiye included mental health programming for children displaced by the disaster.

## Emergency Response

Delivering urgent relief when it matters most

Catastrophic earthquakes struck Türkiye, Syria, and Morocco this year, leaving millions of people in need without access to care. Project HOPE mobilized partners to support relief efforts in the affected areas that included search and rescue operations, hygiene kits, incubators, sleeping bags, mobility devices, clean water, mobile medical units, mental health support, and housing for health workers who lost their homes. Our teams also provided urgent relief in areas experiencing violent conflict, including Israel, Gaza, Armenia, as well as Sudan, where Project HOPE helped deliver 24,000 pounds of medical supplies, pharmaceuticals, hygiene supplies, and therapeutic food to support Sudanese hospitals and health facilities in need.

**Project HOPE provided direct medical services to 561,000 people affected by natural disasters or humanitarian crisis in the last year**

## Humanitarian Assistance

Providing support to strengthen health systems facing crises

**Project HOPE's response to the war in Ukraine has now reached more than 1 million people**

Project HOPE's humanitarian assistance work helped millions of people facing crises improve their access to primary and mental health care in 2023, including programming in Ukraine, Poland, Moldova, Ethiopia, Nigeria, and Colombia. In Haiti, where health systems have struggled under the weight of the country's complex humanitarian crisis, Project HOPE implemented a multi-sectoral response that included mobile medical units, health worker trainings, hygiene kit distributions, pharmaceuticals, medical supplies, hospital infrastructure repairs, mental health programming, and more.

Project HOPE provided medical staff, medicines, health worker trainings, repairs, mental health support, and gender-based violence case management to support Haiti's health system.

*Nadia Todres for Project HOPE, 2023*

In the Dominican Republic, Project HOPE has provided critically needed equipment like incubators, ventilators, and radiant warmers, as well as health worker trainings to help save more newborn lives.

## Advancing Global Health

Building long-term solutions that advance access to care

Around the world, Project HOPE builds sustainable solutions that strengthen health systems, equip health care workers, and improve access to care. Whether launching prenatal care groups in rural Nigeria, equipping delivery rooms in the Dominican Republic, or building Sierra Leone's first-ever Master of Science degree in Neonatal Nursing, our work creates long-term transformation and accelerates a world where everyone has access to the care they deserve.

**Project HOPE's maternal health programs reached more than 76,000 women, infants, children, and health workers in the last year**
